

JAIME AND JOAN CONSTANTINER SCHOOL OF EDUCATION

<http://www.tau.ac.il/education>

The B.A. program of the School of Education provides students with basic concepts and a broad background in the educational sciences.

B.A. level studies do not provide professional training, nor do they qualify students for a Teaching Certificate or other professional diplomas.

Plan ahead! Students who wish to pursue their studies in the School Counseling or Special Educational programs should realize they need a Teaching Certificate in order to practice. They are, therefore, advised to choose as a second major a subject which is taught in secondary schools.

Applicants may not choose two majors in the School of Education

0721 Human Development in Education

The B.A. program in Human Development in Education includes courses in normal and abnormal development as well as introductory courses in school counseling, special education and education of children with hearing impairment. The program is divided into two areas:

"Human Development in Education" – School Counseling and Special Education – 0721 (without track specification).

"Human Development in Education" - Education of Children with Hearing Impairment (track 104).

The candidate should specify the area in his application form.

The first two years of study in School Counseling and Special Education follow the same track. In the third year, students take core courses specific to their area of studies.

In the area of Education of Children with Hearing Impairment, students begin their specialization in their chosen field during the second year of studies.

Psychometric Examination

All candidates, including B.A graduates are required to take the psychometric entrance examination and achieve **a minimum grade 570**
