At its session on the 28th day of February 2007, the Senate of Tel Aviv University resolved to honor

Mary Jeanne Kreek

in recognition of her illustrious scientific, clinical and teaching career that has spanned decades; her groundbreaking work in the biology of drug addiction, particularly the development of the methadone treatment for heroin addicts that has saved millions of lives around the world; her pivotal role in society’s recognition of addiction as a disease; her prolific and original writings that have been featured in the most prestigious scientific journals; and in special recognition of her extensive mentoring and training of young researchers in many countries; and her endeavors in advancing international cooperation in the field between leading scientific institutions, including Tel Aviv University, by conferring upon her the degree of

Doctor Philosophiae Honoris Causa

of Tel Aviv University
