Statistical Learning, Fall 22-23
Rules for take home exam

 Please read these rules and confirm that you understand and accept them before you receive your exam

1. You have exactly 7 days to solve the exam. It has to be received by me by exactly a week after the day and time you start. ABSOLUTELY NO EXTENSIONS. Late submission will be penalized.

2. Submission is by email to me. Email problems will not be accepted as an excuse for late submissions. It is your responsibility to make sure that your email works properly and that I receive the submission on time.

3. The exam must be taken completely alone. Showing it or discussing it with anybody is forbidden, including (but not limited to) the other students in the course in current or previous years.

4. You may use any publicly available material you want, including books, the internet, etc. (You are NOT allowed to actively use the internet, like submitting questions to internet discussion groups).

5. If you find a solution of a test problem in a book or online, cite it in your submission and write it down in your own words. Do not copy it as-is, but make changes which demonstrate you understand what you are writing. Otherwise I may not accept it.

6. Make an effort to make your submission clear and readable. Severe readability issues may be penalized by grade.

7. Submit your code in a separate file (or integrated into the solution) with comments and explanations. Even if the final result is wrong, the code may allow me to find the bug and award partial credit.
