THE JOBLESS FUTURE REVISITED:
TECHNOLOGY AND EMPLOYMENT IN THE AGE OF
SMARTPHONES, BIG DATA AND ARTIFICIAL INTELLIGENCE

Reports arrive nearly every day heralding the latest technological advances, from self-driving cars to robotic surgery to the virtual classroom. Will these technologies so thoroughly displace human workers that the link between employment and income needs to be reassessed? In this lecture, Jacobs offers a framework for analyzing the prospects of job gains and losses in particular industries and occupations, and illustrates these ideas with a set of contemporary and historical case studies.

The lecture will be held on Thursday, 5 May 2016, at 14:00, in room 527 Naftali Building of Social Sciences Tel-Aviv University, Ramat-Aviv
